About Me

A Computer Science student with hands-on internship experience as a Backend Developer, specializing in E-commerce platform development. Expert in designing efficient Database Schemas and integrating RESTful APIs for complex systems. Committed to applying logical problem-solving skills and high attention to detail to deliver high-quality software solutions

Education

- Maejo University | Chiang Mai, Thailand
Bachelor of Science (B.Sc.), Computer Science GPA: 3.50 / 4.00 [2022 -2026]

SKILLS

Languages

- JavaScript (ES6+), TypeScript, PHP, SQL

Frontend

- Next.js (App Router), Vue.js (Basic), HTML5, CSS3

Frameworks & Backend

- Laravel, Express.js

Database & ORM

- MySQL, PostgreSQL, Oracle (Basic), Prisma ORM

Core Skills

- SQL Querying, RESTful API Design, CRUD Operations, Database Schema Design

Other Skills

- Full-Stack Development, API Integration, JWT Authentication, Middleware, Git

Experience

Backend Developer Intern SC Spark Solution

Backend develop

May 2025 - October 2025

Project: LaraClassifier (Web Classified / E-commerce System)

- Developed and optimized RESTful APIs using Next.js (App Router) to improve performance and scalability
- Migrated legacy Laravel monolithic architecture to a modern API-driven system, enabling better separation of frontend and backend
- Designed and implemented relational database schemas using Prisma ORM with MySQL
- Built core platform features including user authentication, product posting, saved posts, and internal messaging system
- Implemented secure authentication flow and session handling for protected routes and user data
- Improved system performance by restructuring API responses and reducing unnecessary data fetching

Project

Warehouse Management System (WMS)

Technologies: Next.js, React.js, Prisma ORM, MySQL, SQL, RESTful API, JWT Authentication

- Developed a full-stack Warehouse Management System (WMS) for inventory and warehouse operations.
- Implemented role-based access control (Admin, Staff, Viewer) using JWT authentication.
- Built inventory management features including product search, stock monitoring, and inbound/outbound transaction handling.
- Designed warehouse management modules with warehouse-level inventory tracking and stock summary reporting.
- Developed analytics dashboards using Recharts, including transaction summaries, stock distribution, and inbound/outbound trend analysis. Implemented autocomplete search, pagination, filtering, and real-time low-stock alerts.
- Implemented autocomplete search, pagination, filtering, and low-stock alert notifications.
- Created RESTful APIs using Next.js API Routes and Prisma ORM.
- Designed relational database schemas and optimized SQL queries for products, inventory, warehouses, users, and transactions.
